**Technical analysis**

Oil and Natural Gas Corporation share prices opened flat and fell down in morning session as it continue its bearish momentum. However, the stock recover from lower level and break the trend line (yellow line in cart below). This trend line breakout generally consider as bullish reversal, which means the prices are likely to move in upward direction from here. On technical front, the prices are trading above its 20 EMA level of 261.6, indicating a bullish momentum. Supertrend indicator is showing bullish trend as green zone is active in it (as shown in image below). The trend line breakout increase the possibilities of a bull run in this stock thus we can expect a upside move of 1-1.5%. On the downside, 261 can act as a support level. On the basis of above analysis, we recommend ONGC 265 CALL option
